HSTPS 系列智能型双电源开关集中监控系统 HSTP6 系列双电源自动转换开关

Intelligent power switch to HSTPS series focused Monitoring System

HSTP6 series dual power automatic transfer switch

海森（天津）电气设备有限公司

Heisen (Tianjin) Electric Equipment Co., Ltd.

企业简介

COMPANY BRIEF INTRODUCTION

海森（天津）电气设备有限公司重组后是一家股份制国家重点高新技术企业，致力于双电源自动转换开关和集中监控系统的研发、设计、制造、销售的专业公司。是双电源自动转换开关集中监控系统的开拓者。

工厂占地面积 20000 平米，拥有员工 200 余人，专业研发团队 20 余人，专业技术人员 80 余人，公司拥有先进的技术装备和国内一流的制造工艺，有国际先进水平的高低温试验箱、步入式高温老化实验室、数控机床生产线、大型高速冲床和压力机等，先进的自动化生产及检测设备。公司设有独立的研发中心，一直注重产品研发及技术储备，不断加强同美洲、欧洲、亚洲等地的多家国际知名企业和国家级科研机构的科技交流与合作，HEISEN 技术源自丹麦，凭借几十年从事电气科研的专家班底和具有丰富软件系统设计、实践操作经验的工程师，不断创新，经潜心研究，研制出具有国际先进水平 HSTPS 系列智能型双电源自动转换开关集中监控系统，第六代 HSTP6 系列双电源自动转换开关。具有雄厚的技术力量和强大的生产能力，从每一个小元件到合格产品出厂都是独立完成，产品始终处于行业领军地位。

公司率先通过 ISO9001 : 2000 国际质量管理体系认证，产品通过 3C 强制认证和测试。建立了完善的质量管理制度，努力追求产品的高质量、高品位。公司获得众多荣誉及专利，被认定为天津市重点高新技术企业，拥有全球化推广战略，在国内建有 8 大区域销售中心，10 多个城市设有办事处，已建成覆盖全国的营销网络。

Heisen (Tianjin) Electric Equipment Co., Ltd. After reorganization, it is a state-owned shareholding high-tech enterprise, committed to the research, design, manufacture and sales of professional centralized monitoring system of dual power automatic transfer switch.

Factory covers an area of 20,000 square meters, with more than 200 employees, including 20 R & D team, professional and technical personnel, advanced technical equipment and manufacturing process, with international advanced level of low-temperature test chamber,步入式high-temperature aging laboratory, CNC machine tool production line, large-speed stamping and pressure machine, advanced automation production and detection equipment. The company has an independent research center, always pay attention to product research and technology reserves, constantly strengthen cooperation with many international well-known companies and national-level scientific research institutions in the field of science and technology exchange and cooperation, HEISEN technology originates from Denmark, based on decades of electrical research experts and engineers with rich software system design and practical operation experience, constantly innovating, through painstaking research, developed intelligent power switch to centralized monitoring system, sixth generation HSTP6 series dual power automatic transfer switch. Has strong technical strength and powerful production capacity, from every small component to qualified products are independently completed, the products are always at the forefront of the industry.

The company passed the ISO9001: 2000 quality management system certification, products through 3C mandatory certification and testing. Established a complete quality management system, strive to achieve high quality, high quality products and high-grade. It is identified as a key high-tech enterprises in 10 cities with offices, has built a marketing. The Heisen Electrical - you never trust Standardized management system and a every corner of the world clear.

硬件设备，品质的保证

HARDWARE EQUIPMENT, QUALITY ASSURANCE

o., Ltd. is a joint-stock national key high-tech enterprise committed to power switches and centralized monitoring system R & D, design, production and sales. It is the pioneer of centralized monitoring system, dual power supply, intelligent power switch and other products.

are meters, with more than 200 employees, more than 20 professional technical personnel more than 80 people, the company has advanced first-class manufacturing processes, advanced international level, high temperature aging laboratory, production line of CNC machine presses, and other advanced automated production and testing independent R & D center has been focusing on product development strengthen the scientific and technological exchanges and cooperation companies and national research institutions, engaged in electrical research system design by virtue of decades, practical operating experience of research, developed with the international advanced level HSTPS seriesized monitoring system, sixth generation HSTP6 series dual powerng technical force and strong production capacity, to the qualified small component is independently and products has always been the

000 international quality management system certification, producting. Established a perfect quality management system and strive forle. The company received numerous honors and patents have beenises in Tianjin, has 8 regional sales centers in the country, more thanketing network covering the whole country.

trusted electrical suppliers. Meticulous, thoroughly tempered. And a systematic quality assurance system for the Heisen quality in

switch monitoring host system

> 系统示意图

System diagram

> 主要功能

The main function

- ◆ 远程监控自动转换开关的运行状态
- ◆ 记录储存故障信息
- ◆ 系统自检功能
- ◆ 有效通讯距离 2000 米
- ◆ The RMON automatic changeover switch operating status
- ◆ Record store fault information
- ◆ System self-test function
- ◆ Effective communication distance of 2000 m

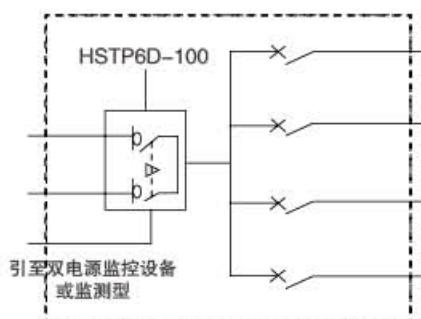

> 监控主机系统组成

Monitoring of the host system

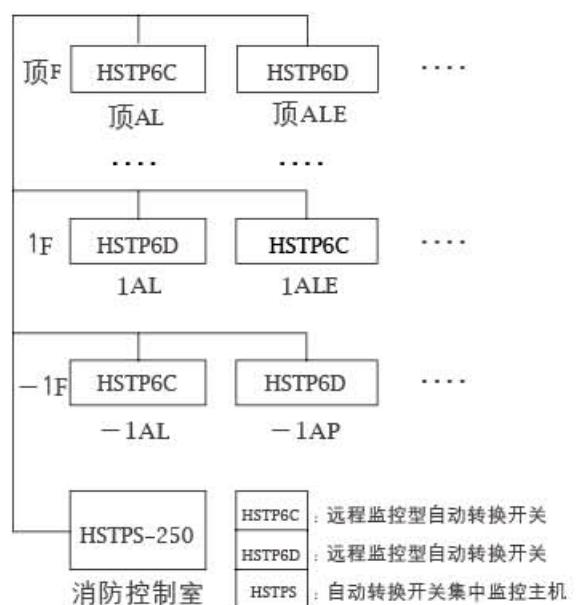

- ◆ 工控机电脑设备一台
- ◆ 监控软件一套
- ◆ HSTP6C/D 系列自动转换开关 N 台 (具体数量根据项目自定)
- ◆ 隔离转换器、集线器、中继器
- ◆ IPC computer equipment
- ◆ monitoring software set
- ◆ HSTP6C / D series automatically converted to N units of the switch
(the exact number depending on the project from the set)
- ◆ isolated converters, hubs, repeaters

> 优异的性能 Excellent performance

体积小、结构简单、外型美观、电流等级高(1A-3200A)操作方便、失压、欠压、断相转换、控制器屏幕显示、转换速度快、延时可调整、分自动和手动、具有机械和电气连锁切换可靠、无噪音、维修方便。

Small size, simple structure, beautiful appearance, high current levels (1A-3200A) and easy to operate, loss of pressure, under voltage, loss of phase conversion, the controller screen display, fast conversion speed and delay adjustable, automatic and manualwith mechanical and electrical interlock switch is reliable, no noise, easy maintenance.

1. 系统化集中监控

具有通讯模块，与双电源集中监控主机连接，监控常用电源和备用电源的工作状态，实现网络化。

1 and systematized centralized monitoring

Communication module, and centralized monitoring host connections, monitor the working status of the common power supply and backup power, network and dual power;

2. 使用寿命长

凭借几十年的生产制造经验，机械加工工艺要求高，每一个零部件进行严格的检验，大大提高 ATSE 产品的使用寿命。

2 long life

With decades of experience in manufacturing, machining process requires each component to carry out testing, greatly improving the life of the product of ATSE;

3. 通断能力强

短路电流接通及承载能力强，具有满负荷状态下的电源切换能力。

3 high capacity

Connected to short-circuit current carrying capacity, has the power switching capability in the full load condition;

4. 可靠的双重保护

采用可靠的机械联锁和电气联锁装置，保证常用、备用电源工作可靠互不干涉，使用安全可靠。

4 Reliable double protection

Reliable mechanical interlock and electrical interlocks to ensure non-interference in each other's commonly used, reliable standby power work; use of safe and reliable;

5. 专利灭弧技术

采用双列复合式触头，横拉式机构，6-630A 系列加装专利灭弧室，让电弧在灭弧室内消除，变成气体后沿通道疏散出来，更加可靠，基本实现零飞弧。

5 patent interrupter technology

A double row of composite contact and horizontal pull body, 6-630A Series installation of patent interrupter, so that the arc elimination, becomes a gas evacuation along the channel, more reliable, the basic realization of zero arcing in the interrupter;

6. 抗干扰能力强

采用单片机集成芯片控制，并加有滤波器，率先通过 EMC 抗干扰检测试验，大大提高开关转换准确、灵活、顺畅。

6 anti-interference ability

The MCU chip control, and add a filter, and took the lead through the EMC immunity testing, greatly improving the switching converter is accurate, flexible, smooth;

7. 介电性能强

本体部分采用玻璃纤维不饱和聚酯树脂制造外壳，有较强的介电性能。

7 the dielectric properties

Body part of the glass fiber unsaturated polyester resin manufactured housing, strong dielectric properties;

8. 特种电机

电机为聚录丁橡胶绝缘湿热型可逆减速电机，齿轮采用直齿齿轮，切换可靠平稳、无噪音、冲击力小。

8 special motors

Motor Neoprene insulating hot and humid type reversible gear motor, gear spur, switch smooth and reliable, no noise, the impact is small;

9. 稳定的工作方式

具有三种稳定工作，采用过零位技术，紧急情况下可强制置零（同时切断两路电源）。

9 a stable work

Has three stable jobs, using the zero-bit technology, emergency situations may be forced to zero (at the same time cut off the two-way power);

10. 具有隔离功能

具有明显通断位置指示功能，实现电源与负载的隔离功能。

10 with isolation

Significantly off position indicator, power and load isolation;

11. 安装方便

常用、备用两路进线端子，负载为一路出线端子，大大提高了安装效率。

11 Ease of Installation

Commonly used spare two input terminals, load all the way to outlet terminals, greatly improving the efficiency of the installation;

12. 保质期限长

我厂郑重承诺 5 年内免费维修更换，售后服务快。

12 long shelf life

I plant solemn promise five years free maintenance and replacement, service and fast;

> 概述 Outline

HSTP6 系列自动转换开关 (ATSE) 是集开关与数字逻辑控制于一体，真正实现机电一体化的自动转换开关。具有电压检测、频率检测、通讯接口、电气、机械互锁等功能。可实现自动、电动远程、紧急手动控制。

操作快速接通分断电路或进行电路转换，通过明显可见状态实现安全隔离，极大的提高了各项电器性能与机械性能。控制部分为塑料外壳，开关部分采用玻璃纤维不饱和聚脂树脂制造外壳。有较强的介电性能，防护能力和可靠的操作安全性。造型美观、新颖、简洁，体积小、功能全，是同类产品的最佳选择。

HSTP6 series automatic transfer switch (ATSE), set switching and digital logic control in one truly mechanical and electrical integration, automatic transfer switches, voltage detection, frequency detection, communications interfaces, electrical, mechanical interlock functions. Can be automatic, electric remote emergency manual control.

The operation quickly turned on or off the circuit or circuit switching, security isolation through visible state, greatly improves the electrical performance and mechanical properties. The control part of the plastic shell, the switch part of the glass fiber unsaturated polyester resin manufactured housing. There are strong dielectric properties, protection and reliable operation security. Beautiful, new, simple, small size, full-featured, is the best choice of similar products.

> 用途 Use

HSTP6 系列自动转换开关主要用于交流 50Hz/60Hz / 额定电压 440V 以下。额定电流 6A 至 3200A 的配电或电动机网络中一主一备或互为备用电源切换系统及市电和发电机组的负荷切换。同时可用于不频繁接通与分断电路及线路的隔离之用。产品广泛应用于消防、医院、银行、高层建筑等不允许断电的重要供电场所的输、配电系统及自动化系统。

HSTP6 series automatic transfer switch is mainly used in AC 50Hz/60Hz / rated voltage below 440V. The distribution of the rated current of 6A to 3200A or motor network, a main one standby or mutual standby power switching systems, and utility and generator set load switching. At the same time can be used for infrequent making and breaking circuit and circuit isolation. The products are widely used in transmission and distribution systems and automation systems of fire protection, hospitals, banks, high-rise buildings do not allow power supply places.

> 控制器说明

Controller description

B, D型控制器(外置式) 6A-630A

NA、NB、NC为常用电源指示：RA、RB、RC为备用电源指示。点亮表示正常，灭(闪)表示欠压或断相。

OA为系统出故障时闪动、报警闪动，同时发出报警声音。按控制模式中的“分断”键可人为关闭报警声。

控制器功能

系统通电，单片机检测常用电源(NA、NB、NC)是否有电及是否缺相、欠压。若全部正常，则将系统负载切换到常用电源供电。若有不正常，则按以下表格对应情况处理。

在自动的状态下，常用电源、备用电源都正常时，则将常用电源投入运行，备用电源不启动。系统负载由常用电源供电。

当常用电源不正常时，单片机将检测当前预置工作状态(手动、自动、自复、不自复)和备用电源是否正常决定是否切换、启动备用电源，系统负载由备用电源供电。见下表：

B, and D-type controller (external) 6A-630A

NA, NB, NC, for the common power indicator; the RA, RB, RC, standby power indicator. Lights to indicate normal, off (flash) that the undervoltage or phase failure;

OA system failure, flashing alarm flashing alarm sound, the control mode of the "breaking" the key to artificially turn off the alarm sound.

Controller functions

System is powered, single-chip detection of commonly used power supply (NA, NB, NC) whether there is electricity and phase failure, undervoltage, if all normal, it will load on the system to switch to the common power supply, if not normal, according to the following table correspondscase.

Automatic state, commonly used in power supplies, standby power is normal, is commonly used power operational, standby power supply does not start. System load by the common power supply.

Commonly used in power is not normal, the microcontroller will detect the current preset status (manual, automatic, self-complex, complex) and standby power to decide whether to switch to start the backup power system load is powered by the standby power. As follows:

控制器控制模式

手动键：可人为选择常用电源或备用电源；

默认密码：9999

自动键：则根据当时使用电源进入自动控制状态；

默认切换时间：

分断键：可使负载从常用电源和备用电源全部分断。

T型 N—>R 3秒 R—>N 3秒 G型 N—>R 15秒 R—>N 3秒 (N

为常用电源；R为备用电源)
输入密码。未进入设置参数或密码输入状态，单按(▲)、(▼)、(●)之其中一键，不予响应。新电路板第一次通电，自动生成以下默认参数：

为常用电源：R为备用电源)

63、100、225 分断—>R 1秒，分断—>N 1秒，N或R—> 分断 1秒
400、630 分断—>R 2秒，分断—>N 2秒，N或R—> 分断 2秒

负载当前供电电源		系统当前预置状态				当前供电电源故障 另一组电源正常否	供电故障时系统处理		当前由备用正常供电时，检测至常用又有电时处理		
		手动		自动			切换至	常用	备用	常用正常否	不切换

●						正常					常用
						不正常	●				
●						正常					
						不正常	●				

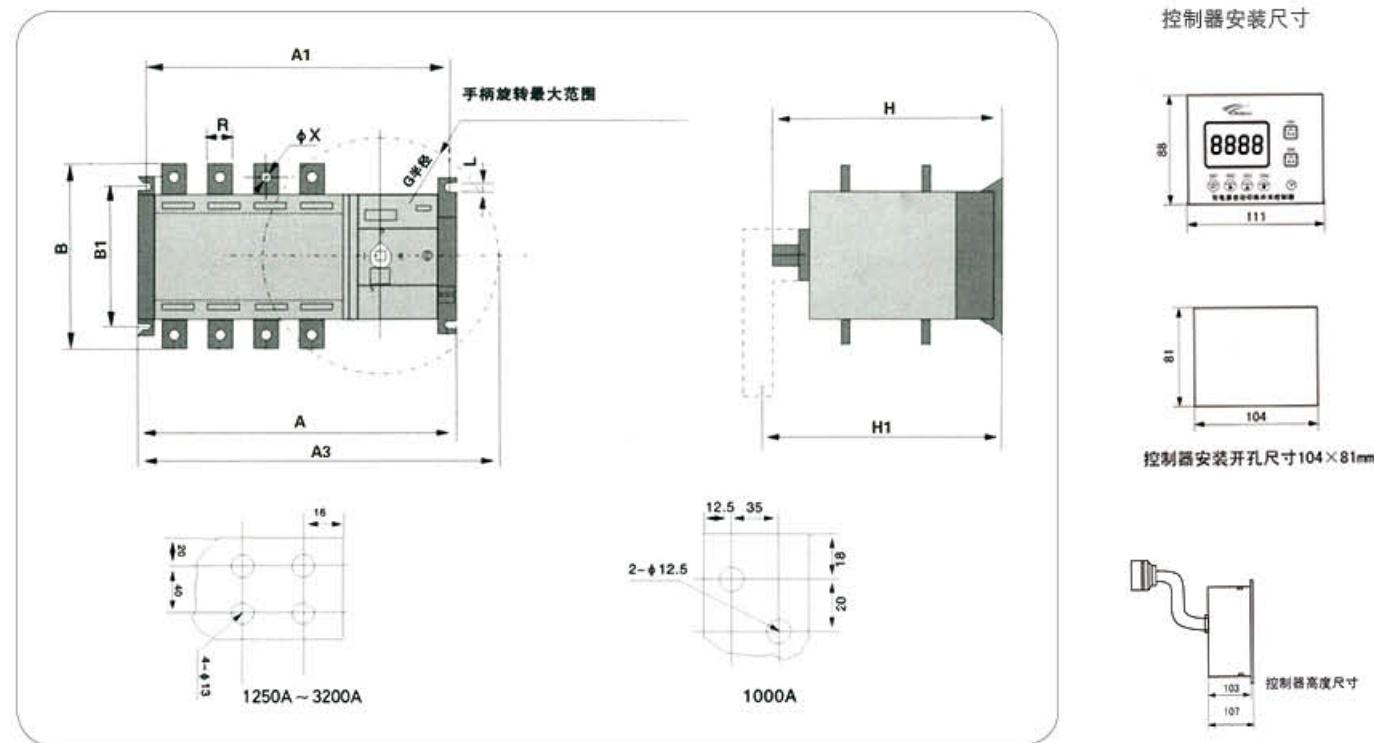

系统负载处于“分断”状态时，不论两路电源是否正常以及系统是否处于“手动”和“自动”的预置状态，系统都仍保持在分断状态。
分断 只有在操作按键 SW5(手动 SW6(自动)后，才将系统工作转入非分断状态(手动—常用—备用或自动—自复—不自复)，负载才有供电，并按上述处理。
